Analyses of effects of the integrated housing and development programme in Ethiopia

Overview	
Identification	EffectsIntegratedHousingAndDevelopmetProgrammeEthiopia_Nesstar
Abstract Assessing the causal impact of wealth on attitudes and well-being is a challenging task, since an individual's economic situation may depend on unobserved characteristics which are likely to be correlated with such outcomes. We overcome this challenge by exploiting the exogenous variation in wealth created by a housing lottery in Addis Ababa, Ethiopia, which randomly allocates the right to purchase an apartment among low-income applicants. Since the apartments are sold at highly subsidized rates, winners of the lottery experience a substantial boost to long-term wealth. We focus on the causal effects of winning the lottery on two separate domains: (i) changes in attitudes toward redistribution and meritocratic beliefs and (ii) economic and psychological well-being. This plan is registered before the data collection started. All deviations from the plan will be highlighted in the papers.	
Unit of Analysis	Individuals

Scope & Coverage	
Keywords	Mental health, Redistribution, Inequality, Charitable giving, Housing
Countries	Ethiopia
Geographic Coverage Ethiopia	
Universe Representative of the people who entered the registration lottery in Addis Ababa.	

Producers & Sponsors	
Primary Investigator(s)	Andreas Kotsadam, Frisch Centre Tigabu Getahun, EDRI Espen Villanger, CMI Asbjørn Goul Bjerrum Andersen, Frisch Centre Vincent Somville, NHH Norwegian School of Economics
Funding Agency/ies	Research Council of Norway Research Council of Norway Research Council of Norway Frisch Centre NHH småforsk

Sampling	
Sampling Procedure Phone survey through Ethiopian Development Research Institute (EDRI)	
Weighting No weights applied	

Data Collection	
Data Collection Mode	Phone survey
